Course description

It could be argued that the primary subject of the economics discipline is development. Certainly governments all over the world worry about their countries’ development, and most individuals are concerned about their economic and social wellbeing. So, for economists and indeed all interested citizens, it is useful to understand how economies grow, what it means for an economy to be developed, and what barriers individuals and countries face in achieving development.

We will work through a set of topics that will all contribute to this understanding. Questions we will be thinking about include the following:

- What is “development”, and how is it different from economic growth? How should a country’s development be evaluated?

- How do agricultural households make decisions? What role does the agricultural sector play in growth?

- How does the structure of an economy change as it grows? What drives rural-to-urban migration?

- How do credit market frictions affect economic activity? Can they lead to poverty traps?

- How does microcredit help to alleviate credit market frictions? What are the drawbacks of traditional microcredit models?
Course Intended Learning outcomes (CILOs)

Students who complete this course successfully will be able to:

1. define different metrics of development, compare their pros and cons, and illustrate how they can be measured
2. explain the theoretical and empirically observed relationship between economic growth and poverty reduction
3. analyse the economic decisions of agricultural households and explain why agricultural growth is critical to economic growth
4. analyse the relationship between the agricultural sector and manufacturing and explain how structural transformation takes place
5. describe credit market imperfections in the developing economy agrarian context and explain why they may impede efficiency
6. evaluate the role of microcredit contract design in credit access for the poor
7. distinguish between correlation and causality, and explain the merits and demerits of different empirical methods
8. critically evaluate empirical research papers and interpret their results

Prerequisites

You must have taken ECON 5130 (Microeconomic Analysis) and ECON 5140 (Macroeconomic Analysis) successfully to enrol in this course. I will assume that you know core concepts in calculus and microeconomics. Please review these if you feel uncertain.

Learning environment

I will lecture and lead class discussions, but I welcome, and do my best to encourage class participation. At any time, please feel free to interrupt me to ask questions or make comments. I will also ask questions and expect you to answer. The questions are not meant to test you. Please do not worry about whether your answer is “correct” or “incorrect”. Often what is incorrect according to a particular viewpoint is correct according to another viewpoint. I am interested in finding out what you think and why you think it.

Learning resources

- When I lecture, I will make notes on the board, which you are free to copy.
• The TA and I will use the course website for announcements and to post homework assignments, homework scores and exam grades. Please check it regularly.

• We will read a few chapters each from the books listed below. All are available through the HKUST library.
  

• In addition we will read some journal articles. The reading list is below. *Readings marked with a star (*) are required reading, the rest are optional. A hyperlink is provided for readings freely available online. Please contact the TA if you have trouble locating any of the reading material.*

Reading List

1. **What is Development Economics About?**
   

2. **Empirical Methods in Development Economics**
   

3. **Poverty & Inequality**
   

4. **Economic Growth & Poverty Reduction**
   

5. Human Development

*T&L, “Human Development”, Ch. 6, pp. 132-166.

6. Agriculture

7. Structural Transformation

8. Characteristics of Agrarian Economies

9. Credit Markets

10. Microcredit

*A&M, “Roots of Microfinance: ROSCAs and Credit Cooperatives”, Ch. 3, pp. 57-68.
Assessment scheme

Class Participation 15%
Your class participation score will depend on how often you raised questions, answered questions or made comments. Students who participate more actively will get more marks. *Attendance and participation are not the same thing*, although of course one is a necessary condition for the other!

Homework 15%
There will be 2 homework assignments for this course. You are expected to do each one. Each assignment must be completed individually: you may discuss the assignment with your classmates but you must submit your own work. Each submission will be given a score out of 10 marks and will be returned to you.

Open-book Quizzes 40%
There will be 2 short quizzes in this course, held during class time. **Quiz 1 will be held at 9 am on March 11; Quiz 2 at 9 am on April 15.** You will be allowed to consult your notes and readings while you answer the quiz. After each quiz, we will have a short in-class discussion of your answers and opinions. Each quiz will be graded afterwards and returned to you.

Final Exam 30%
The final exam will be **closed-book.** It will be held as per the final examination timetable posted by the Academic Records and Registration team at the Academic Registry. **Please note:** The final exam will cover material from the entire course.

Academic honesty
Academic dishonesty is immoral and unfair, and I take a very serious view of it. You must be aware of HKUST’s policy on academic integrity, and abide by its provisions. I will report all cases of suspected misconduct to the Dean’s Office, and their decision will be final and binding.
