

ECON6110D
Yatang Lin

Department of Economics, HKUST
Spring 2019

Syllabus: Environmental Economics

Time: 02-APR-2019 - 21-MAY-2019

Tu 09:00AM - 12:20PM

Location: Rm 1033, LSK Bldg

Instructor: Yatang Lin

6052 LSK Building

liny@ust.hk

Office Hours: TuTh 4:20-5:00PM at my office, or by appointment

TAs: Tsai Yiu Hing Barron (yhbtsai@connect.ust.hk)

Course Objective and Learning Goals

The course is designed to introduce students to key contemporary concepts in environmental economics and equip them with the approaches in economics that are generally applied to analyze environmental problems and policies. The class will be divided into two parts. Part I will cover the ways in which markets fail to efficiently allocate resources in the presence of pollution along with the class of Pigouvian policies used to correct those failures. Part II will focus on the empirical techniques used by economists to assign monetary values to environmental costs and benefits.

Prerequisites

You should have completed Calculus and at least introductory microeconomics courses (MATH 1012/1013/1020/1023 and ECON 2103 or equivalent courses) before taking this class.

Requirements

The following are required for successful completion of the course: (1) 2 problem sets that involve problem solving, (2) an individual project (3) a final exam, and (4) class participation.

Grading

Grades will be determined based on the following allocation:

Two problem sets: 10%; Individual paper: 15%; Mid-term exam: 30%, final

exam: 40%. Class Participation: 5%. The instructor reserves the right to make small adjustments to final total grade score.

Problem Sets

We will have 2 problem sets. The purpose of these problem sets is to help cement the theoretical economic foundations underlying the models we will discuss in class. You are welcome to work on problem sets with your classmates, but I expect everyone to write up their own set of solutions to each assignment. Writing up your own solution set will help ensure that you understand the concepts. If you work with classmates on assignments, please make a note of who you worked with at the top of your assignment.

Exam Policy

Students who miss the test and/or exam on the scheduled dates would be marked zero. Alternative arrangements would only be granted to students with critical medical conditions, supported by sick leave certificates issued by medical doctors for the date of the exam. There will be NO make-up exams under any circumstances. A student who is excused from the test on medical grounds will have his/her final examination covering the weight of the missed test.

Individual Project

Students have the following options for an individual project

1. Evaluation of a particular urban or environmental policy
2. An empirical research proposal

The final product will be a paper less than 10 pages long including references (font 12 and double spacing).

For a policy evaluation project, you can choose any given environmental policies you are interested in, describe the background of the policy, and discuss your evaluation of the policy in the following aspects: (1) Effectiveness: is the policy implemented successfully? are there any obvious loopholes? (2) Efficiency: does the policy achieve its goal with the lowest economic and social cost? Are there any significant deadweight loss? (3) Equity: how will the policy affect different groups of agents in the society differently? (4) Administration cost: is the policy costly administratively (think about monitoring, reporting, verification and enforcement cost)?

For a research proposal, your goal is to come up with a project that will ultimately produce convincing empirical evidence on an interesting, policy-relevant question, which might be developed into your thesis. You might also want to identify an existing empirical article in the economics literature for which you can obtain similar data. The proposal should include detailed descriptions of where you can find the data needed, and the econometric strategy you plan to use to test your hypotheses.

Deadline of submission: May 30th midnight, 2019. Late submissions will not be accepted.

Readings

The course does not have a required textbook, but you may find the following textbook useful for your study:

Charles Kolstad, Environmental Economics (Oxford University Press, 1st edition 2000, or 2nd edition 2010)

I will assign other readings as we progress. They are not required but they will help you understand the course materials and put them in context.

Course Outline (*Tentative, instructor reserves the right to modify the content*)

Part I -- Market Failures and Pigouvian Policy

Week 1: Apr 2

- Course Overview
- Public Good Provision, Coase theorem

Week 2: Apr 9

- Externality Pigouvian Taxation
- Cap and Trade

Week 3: Apr 16 (PS1 assigned)

- Social Discounting
- Equity

Week 4 Apr 23 (Break)

Week 5 Apr 30 (PS1 due)

- Midterm Exam
- Review of Regression Analysis

Week 6: May 7 (PS2 assigned)

Environmental Valuation: Hedonic Method

Environmental Valuation: Travel cost method

Week 7: May 14 (PS2 due)

- Pollution and Health
- Value of Statistical life and Defensive Investments
- Contingent Valuation,

Week 8 May 21

- Climate Change
- Final Review
