Course Description

This course provides practical working knowledge of various derivatives. It aims at “demystifying” fancy and often confusing derivatives products, including forwards and futures, options, and swaps. At the end of the course, the students will acquire an understanding of the how these derivatives are traded, what are the payoffs for the investors, and how to value them. Cases are used to provide students with experiences of applying these models and principles to complex problems in the real world. Popular instruments in the Hong Kong market (e.g., equity linked notes) will also be discussed.

Prerequisites

Basic knowledge of bonds, stocks, CAPM, market efficiency
A little knowledge of calculus and statistics
Some knowledge of Microsoft Excel

Course Materials

John C. Hull: *Options, Futures, & Other Derivatives*, Prentice Hall
(Required, available at University Bookstore)
Articles, cases, homework, etc.
(Will be made available during classes)

Course Work

Class Participation: Necessary but not graded
Exercises: Questions in the textbook, not graded,
Cooperation encouraged.
Two sets of homework: 40% of the course grade, complete individually
Final Exam: 60% of the course grade
